

**IQ2-2019****A comparative analysis of nitrogen accounting models with particular reference to agriculture****Question**

We are asking for clarification on the of models that you would like assessed.

The models referenced in the tender appear to be more conceptual, is it possible to provide a more specific example of the models you want considered?

**Response**

The research is being commissioned to provide a comparative analysis of conceptual approaches. We would welcome bids that might include examples of existing tools demonstrating the practical application of conceptual approaches. However the focus of the research will be on the underlying approaches.”
